

# A GLIMPSE OF THE FUTURE THE REMARKABLE WINDJAMMER® SS

Most riders agree that Vetter is the acknowledged leader in fairings. In craftsmanship, attention to detail, and overall quality, the Windjammer III has become the standard of the industry. Competitors have been trying to copy it for years but have yet to come close. If anyone is ever going to make a "better" fairing than a Windjammer III, Vetter is going to do it.

Which brings us to the remarkable new Windjammer SS. One look tells you this is more than just an improved Windjammer. It's literally a glimpse of the future.

## LEADING EDGE LIGHTS.

The ingenious Leading Edge Lights are integral parts of the fairing and incorporate turn signals and running lights. They're larger and mounted higher than their predecessors, making you more visible. Gone also is the turbulence at speed caused by conventional turn signal stalks and protruding side

The Windjammer III, still better than anyone else's fairing.

lamps. The Windjammer SS is the slipperiest fairing ever built!

## TWO BUILT-IN HORNS.

The Windjammer SS can be fitted with two optional forward-facing dual-tone horns that are louder than any motorcycle's (they should be—they're the same as found on big luxury cars).

## ADJUSTABLE HEADLIGHT.

The newly-designed headlight can be adjusted simply by turning the conveniently-located knob.

## COLOR-MATCHED STRIPING.

Optional striping, precisely color-matched to your bike, is available for the Windjammer SS. In fact, we have the largest selection of options in the business.

At Vetter we don't believe in standing still, but we don't believe in planned obsolescence either. We still build the Windjammer III, the best of anyone's fairings. And now we build the Windjammer SS, the best of our fairings. See them both at your authorized Vetter dealer and see what the future of fairings is all about.
