

SMITH SMX: PERFORMANCE THAT MAKES YOU FORGET YOU'RE WEARING GOGGLES.

Mike Bell and Bob Hannah know what it takes for a goggle to perform. That's why they have switched to the Smith SMX. And here's why you should too!

With team Yamaha's Bell and Hannah, Dr. Bob Smith directed his 15 year experience in high performance goggle design to develop an all new competition goggle. The result: the New SMX goggle incorporating design features it takes to keep Bob and Mike on top.

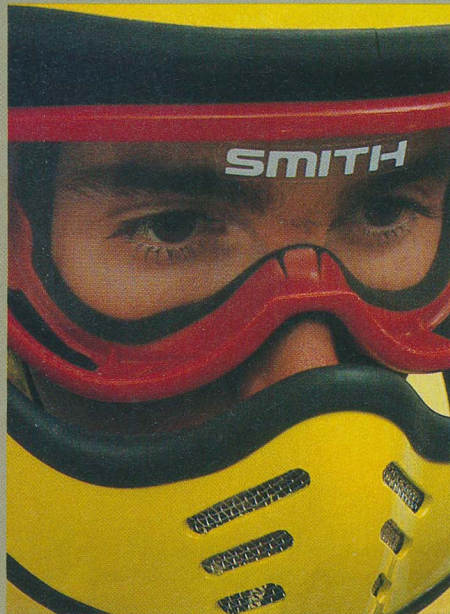

The SMX is designed to fit all face shapes and with helmets forming a *positive comfortable seal*. The goggle gives such a wide field of vision that you'll forget that you're wearing goggles.

The frame has foam-covered vents to keep dust out. The vent area of the Smith is much greater than conventional goggles to increase ventilation and keep you cooler in those long motos. Further ventilation is available with our exclusive *through-the-lens vent option*.

The SMX features a quality *lexan lens* for clarity and durability. A complete line of lens options and *tear-offs* is also available.

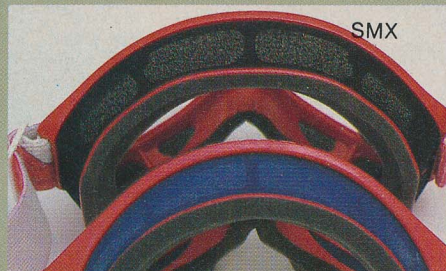

The all new *vented lens* is an exclusive lens option from Smith. It allows filtered air to pass through the lens. This is the answer for extra air flow in hot, muggy conditions.

Smith's split V nose feature offers the ultimate in fit and comfort for all nose sizes and shapes. The SMX provides the maximum in field of vision.

SMX is designed for excellent fit with all popular off-road helmets. The *wide strap* offers slip-free, comfortable performance.

Smith vs. the Competition: The SMX has more vent area than any motorcycle goggle on the market. This allows maximum filtered air flow to reduce heat build up and fogging.

The SMX is available in red, yellow and blue. Also available is a full line of replacement lenses and tear offs. See your dealer today!
