

LET THE FORCE FLOW

MOTO 4, Bell's latest, most exciting and innovative off-road helmet yet, featuring 'FORCE FLOW', an entirely new and revolutionary internal ventilation system.

When your problem is how to stay cool in the hottest competition, Bell's MOTO 4 with 'FORCE FLOW' provides the perfect solution. It's as simple as ABC... [A] During forward motion, cool air is forced through ducts on either side of the MOTO 4 face piece and up through channels between the shell and helmet liner. [B] Air then enters the helmet interior through vents in the top of the liner, and passes over the wearer's scalp - keeping the head cool. [C] "Used" air is routed back between the liner and the shell, and is extracted through exhaust vents at the rear of the MOTO 4 shell.

As if that's not enough - the Bell MOTO 4 fibre-glass helmet also incorporates some other great features including:

- *A foam lining covered in polypropylene that can be removed from the helmet for washing or swapping so it keeps fresh and clean.

- *A uniquely adjustable visor held firmly in place by a pivot-and-screw system. The visor also features a foam sealant to keep mud and water from running onto the rider's face and goggles.

- *A recessed eyepoint ensuring that goggles not only stay in place, but provide a tighter, better fit to keep out dirt and dust. This design feature also allows the rider to put on his goggles faster and more easily.

- *Rubber plugs that can be inserted into the front air ducts if the rider feels he's 'cool enough'.

- *Superb new Graphics plus, of course, the legendary BELL logo. Approved to BS2495/Snell 80/ACU Gold, the BELL MOTO 4 is available in Red or Yellow, and in sizes 6³/₄, 6⁷/₈, 7, 7¹/₈, 7¹/₄, 7³/₈, 7¹/₂, 7⁵/₈, 7³/₄.

As with all BELL Helmets, the MOTO 4 is only available through your local BELL Helmet Dealer. If you encounter any difficulties or require further information, write to the sole U.K. distributor. LET THE FORCE FLOW BE WITH YOU.
