

SPLIT PERSONALITY

LAZER

MX

Lazer MX indeed has a personality problem.

Lazer MX is primarily designed as an off road helmet but it doubles superbly as a weekday ride-to-work helmet.

Lazer MX converts to a road helmet by simply undoing two screws and fitting the "one finger operation" visor.

The award winning Lazer MX features Ronfalin construction. Ronfalin is a revolutionary new material developed by Lazer, specifically formulated for its strength, lightness and ability to resist the effects of grease, petrol fumes and aging. Ronfalin is the first thermoplastic material to meet all European safety requirements.

Lazer MX's lightweight, aerodynamic design, outstanding comfort, great vision, flow-through ventilation all add up to reduced rider fatigue (great for that long Enduro or just everyday riding).

Lazer MX comes standard with contoured peak and is available in sizes XXS to XL.
